

1. Graph your data from the lab yesterday.
2. Write a conclusion that includes a brief description of photosynthesis and an explanation of your results from the lab. Explain any errors that may have occurred.
3. Come up with an experiment you could do to test photosynthesis using the same leaf disk technique but with different variables. Write a description and procedure (make sure someone could truly follow your procedure)
4. Turn it in when you are finished and you can go to the following site and take practices tests for cellular respiration and photosynthesis:
