

Ecology

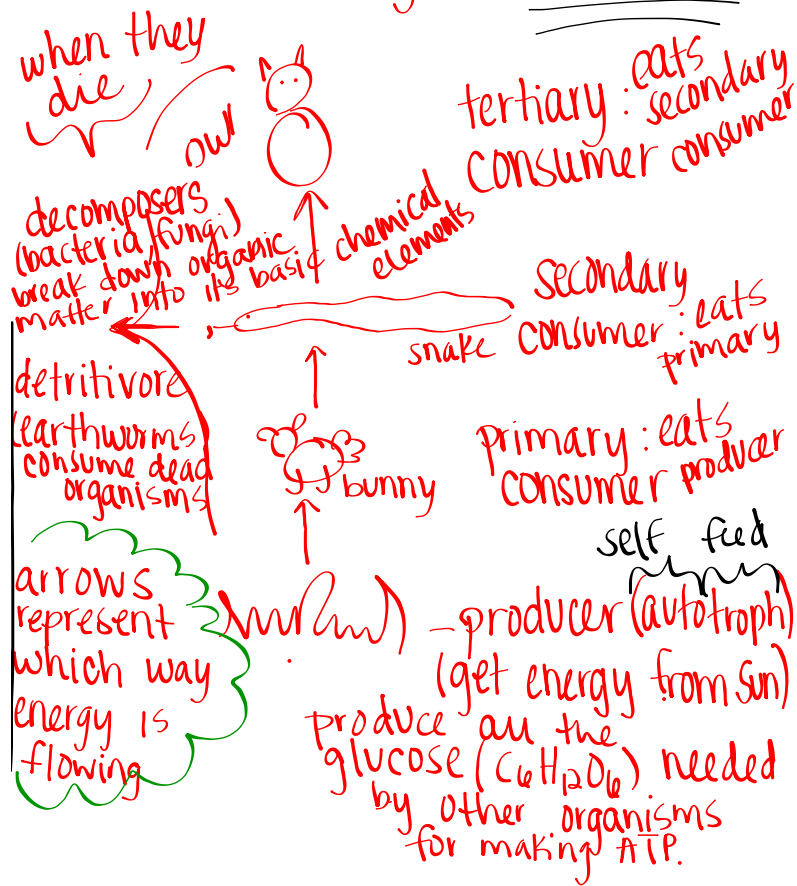

-The study of ecosystems

ECOSYSTEM: all the
living (biotic) +
non-living (abiotic) things
in a particular area
+ how they interact
w/ one another

Trophic levels: feeding level

fulfilled by a particular organism w/in an ecosystem as shown by a food chain.

all consumers are heterotrophs

5 abiotic factors (labeled)

5+ plant populations

10+ animal populations

1 food chain labeled in blue

*label
organisms*

1 food chain in red

decomposer

food web in orange

if possible, label a keystone species
