

Keystone species: an organism so vital to its ecosystem that w/out it the environment could collapse.

Food web: all the food chains in an ecosystem.

5 abiotic factors (labeled) *abiotic*

5+ ^{producer} plant populations

10+ ^{consumer} animal populations

Label organisms

2nd 1 food chain labeled in blue

3rd 1 food chain in red *producer → 3rd consumer → decomposer*

1st food web in orange

if possible, label a keystone species
